

Death Triangle of Covid-19 –The Acupuncture Angle

Sachin Purushottam Lohiya

Basic Allopath and Acupuncturist, India

Abstract:

Lungs belong to the metal element. The depletion of metal element is as a result of weak lungs. Metal and water has mother and son relationship. Weak mother leads to weak son. Whereas metal is mother to the water, in turn water also gets depleted. Depletion of water element effects in 2 ways. a- it depletes the Yaun Qi – the kidney Qi which further increase the attack of pathogen on affected organ –the lung. b. Water extinguishes fire as per the KO cycle in other words water controls fire. Weak water element as a result of weak metal, loses its control over fire. The imbalance in the five element system starts. Though the fire is not really increased, there is a false increase also called the empty fire. Excess fire metals metal. The empty fire will overact on metal leading to further weak lungs. This will in turn deplete water element and again promote empty fire. This destructive interactions in Metal –Water-Fire trio, I call as Death triangle of Covid-19.

Biography:

Dr. Sachin Lohiya is a renowned acupuncturist, who specializes in treating acute, chronic and rare diseases by using the healing modalities of traditional Chinese medicines. His main aim is to treat patients with natural ways so that he can enjoy a healthy healing. He works at Dr. Lohiya Acupuncture Treatment & Research Center.
