

Endolift for the best face and body non-surgical lifting

Roberto M

Skin and Medical Clinic, Italy

Abstract:

Background: We assessed the outcomes after 13 years of endolift laser method for the delicate restoration of face, neck and body utilizing a very thin optical fiber associated with a 1470 nm diode laser, combined in the most recent years with ultherapy which permits in a single session to lift the muscles and the skin. Methods: We report our experience after more than of 4000 areas treated with endolift for the treatment of skin laxity of the face, neck and the body. A 200-300 micron fiber is used for the face and the neck; a 400-600 micron fiber is utilized for the body. The fiber is effortlessly embedded, without cuts under the skin straightforwardly in the shallow hypo-derma. After endolift, a ultherapy meeting is performed. Results: The area of skin laxity of the face, neck and body, can profit by the likelihood that the endolift laser needs to withdraw the skin and redesign the derma, activate the collagen creation, invigorate the neo-angiogenesis. Ultherapy assists with acquiring the most extreme outcome conceivable working all the more profoundly the center and profound hypo-derma up to the solid belt, allowing to get a quick and a long haul lifting. Ends: Endolift laser joined with ultherapy is the best non-careful treatment for the zones of strong and skin laxity of the face and the neck.
