

## Esthetic Patient Requests and Environmental Risks Affect Healthy Periodontium

**Ossama A. AlKhatib DDS, MSc , PhD.**

*Assisting Prof., Perio. Dept., Alarak specialized dental center in Jeddah, KSA.*

### Abstract:

Dental patient becomes more educated with different required cosmetic demands, and all concepts of Periodontal therapy are renewed to respond of esthetic patient requests and digital smile, these will increase awareness toward improvements in preventive dentistry and follow up periodic recalls for healthy periodontium.

Therefore, an understanding of the impact of life style on periodontium becomes critical because so many risk factors locally or systemically and environment agents give standing up of bacterial periodontal diseases or disorders. Tissue preservation becomes the main aim of new esthetic dentistry, and oral-Periodontal deformities should be manage earlier as soon as possible. New periodontal attachment, regeneration of destructive alveolar bone, and muco-gingival tissue augmentation are the ideal outcomes of periodontal plastic surgery to obliterate periodontal pocket and reconstruction of periodontal tissues.
