As the member of the Journal of HIV and AIDS Research, I am very glad to note that all issues of Volume were published online well in the course of 2019, and the print issues were also published and dispatched online within 30 days of the publication of the issue.

As we all know that HIV is a virus that affects cells that help the body combat infection, raising a person's susceptibility to certain infections and diseases. This is transmitted through contact with other HIV-positive body fluids, most often during unprotected intercourse (sex without a condom or HIV medication to prevent or cure HIV), or through sharing drug injection equipment. JHAR also broadcast latest updates and information about the HIV/AIDS on twitter and LinkedIn to make people aware of their work and the research going on around the world. JHAR ranked first among all HIV/AIDS journals published in India, as it is new journal but it have received very good response form public, scientists and researchers. It includes all relevant HIV and AIDS topics including molecular biology, clinical research, epidemiological studies, and approaches to immune regeneration, prevention, medicinal science, vaccination, pathogenesis, diagnosis, drug resistance, virology, treatment techniques, antiretroviral and palliative therapies, and public health policies. It publishes all types of articles like research paper, review articles, short communication, mini review, editorial notes, case reports, etc. The journal's authoritative editorials and expert reviews have the ability to serve as a platform for discussion on health policy. JHAR submitted a total of 5 papers during the year 2019, in which all the 5 articles (100 percent) got accepted in the preliminary screening as they have minimum plagiarism percentage [1,2].

The articles are then subjected to the peer review process and all of them were approved. 2 articles were published in the issue 1 of Volume 1 which was released in 2019. The Indian and international research scientists have reviewed the papers published in volume 1. An article's total lag time of publication was further reduced to 68 weeks. I would like to take this opportunity to acknowledge the contribution of all the editorial board members during the final editing of published articles and the help provided by the editorial assistants in bringing out JHAR issues in due time. I would also like to express my gratitude to all the writers, reviewer, the publisher, the JHAR advisory and editorial board for their help in bringing out yet another volume of JHAP and look forward to their unremitting help in bringing out Volume 2 of JHAR in due course. I am very happy to be the member if this journal and wish that it will achieve great success in upcoming years. They include all of the articles according to the current scenario's need and necessity. They plan to have new and more informative articles this year to inspire us to do something fantastic in the field of goods derived from natural sources. If anyone is interested in submitting their paper, he can go through the instructions provided on their home page.
