Abstract

Management of periodontal lesions is in equal parts identification of the lesion and then therapy for resolution of the lesion. There have been a variety of materials attempted for use in periodontal lesions. The local drugs are used in conjunction with active SRP which is a pre-requisite. This presentation will highlight the identification of periodontal lesions around a tooth and the functional components of Blue M gel and how repeat applications of the gel is effective in resolving the lesions and bringing pocket depths down and eliminate inflammation and infection and its related signs and symptoms of bleeding and exudation.

Biography:

Ajay Kakkar is in Perio and Implant practice for over 25 years and has been very strongly involved in training and teaching. He has lectured in India and world-wide on dentistry and over the past 5 years in Association Management. He is coordinating extensive research programs out of India with connectivity into Malaysia, Egypt and the US. He manages all International work for Smylist KFT which is based in Budapest, Hungary..
