Disease is liable for one of every eight passages overall more than AIDS, tuberculosis, and jungle fever together. Common item despite everything keep on being significant as wellspring of novel medications in light of the fact that these drugs doesn't require modern instrument, peep assets, less poisonous, no protection from them by microscopic organisms contrasted and the manufactured medications. Anyway the characteristic item will keep on being significant moreover in three zones of disclosure, they are an objective for creation by biotechnology, as wellspring of new lead mixes of novel concoction structure and as the dynamic elements of helpful medicines partitioned from conventional frameworks of folkloric medicine(1). The herb *Loranthus Europaeus* leaves and natural products was utilized in Iraq conventional medication for treatment of aggravation, tumor and antimicrobial disease (2). Thus we attempted to utilize the phytochemical and pharmacological investigations to approach to their bioactive items as another hotspot for medication. The extraction of dynamic constituent of *Loranthus Europaeus* (flavonoids terpenoids and alkaloids) by utilizing chromatography technique utilizing a thimble of suxlet with various natural solvents. The ethylacetate remove contain flavonoid which contain

quercitin and quercitrin. The dynamic fixing blend of LE leaves remove have utilized as mouth wash for 10 women diverse age have bosom malignancy and under treatment with chemotherapy. We found that the bioactive military separated from LE utilized as mouth wash cause fix of the aggravation of the mouth of those women. What's more that 10 people of various genders grumbling of pimple connected to one of their tooth rewarded with various kinds of anti-infection there was no reaction however when have given an anti-toxin with bioactive specialists of this LE there was finished fix of the growth and there was no requirement for activity which give the chance of quality of at least one of these (quercitin and quercitrin) dynamic operators go about as constructive nano transporter of the anti-microbial to the blister straightforwardly and fix it. In the accompanying therapeutic plant as *Haloxylon*, *Loranthus European*, *Salvia*, *Artemesia*, *Ocimum sanctum* microemulsion, polymeric nano particles go about as medication conveyance hindrance for alkaloids so which act legitimately on malignant growth cell without reaction So we can have modest disease drugs treatment which accessible from Cheap assets and safe compelling disease treatment.
