EDITORIAL

I am pleased to announce that the Journal of Microbiology and Immunology (JOMI) is a new journal that gives me the opportunity to present the journal's achievements in 2019.

Journal of Microbiology and Immunology is an open access journal whose main aim is to provide the most important and authoritative source of information about current developments and findings in Microbiology and Immunology. Microbiology work assumed greater significance for the production and testing of new vaccines, medicines as well as genetic engineering for environmental applications, in the light of emerging diseases. Fundamental and clinical research into microbiological concepts and molecular mechanisms, especially for pathogenic organisms, has attained importance and choice.

In addition to both basic and clinical aspects of virology, bacteriology, mycology, parasitology and immunology the journal deals with scientific topics including general microbiology, immunology, and host-pathogen interactions. The journal aims to address the growing need for comprehensive research-based knowledge among pathologists, clinicians and professionals in the healthcare sector. The entire issue was published by Journal of Microbiology and Immunology at the time, and the preprint was also released and dispatched online within 30 days of the article's release. Journal of microbiology and immunology accepts manuscripts of all forms such as research papers, case reports, review reports, short commentary, mini review etc. The purpose of this journal is to share and deliver content work done by researchers and scholars in the field of Microbiology and Immunology.

As we know JOMI is the new journal; and indexing by various indexing agencies is under growth.

JOMI is a high-quality journal devoted to the management of time and completes all the work on writing any article in a given period of time. As the cumulative time span of every article to be published online is 45 days from the date of receipt. The time takes from 4 to 5 weeks for different processes such as quality check, peer review; and processing of article.

Quality checks and peer review processes complete within 2 week and the time period for the publication is only 1 week after acceptance of the article by reviewers and editors.

They provide all the authority to the editor to make the final decision about the article assigned to them. Review process and method of peer review conducted within a given time frame. If in the peer review process any manuscript is not approved, the author is given another chance to change the manuscript. JOMI has received 3 research articles and 1 short commentary from authors but they did not fulfil journal criteria so they got rejected in the preliminary quality check process. JOMI released 2 issues under volume 1 in those awards and international conferences published. For recent updates on what's going on in the newspaper, Journal uses online broadcasting and various social media platforms such as Twitter, Linked In and Facebook to make people aware of JOMI trend-setting topics. I would like to acknowledge the contribution made by all reviewers and other supporting communities during the final editing of the published articles and the assistance provided by the editorial assistants in the timely resolution of JOMI issues. I am very grateful to them for giving me the opportunity to acknowledge the work and other peoples who have made this journal a success.
