I am thankful to the Journal of Dental Research and Practice for giving me the opportunity to acknowledge the work of all members of JDRP including writers, reviewers, editors, and other supporting peoples during the final editing of articles published.

As the JDRP is a newly journal, all issues of Volume 1 have been released online well in due time and the printed issues have also been released and dispatched within 30 days of the online release during the year of 2019. JDRP is an open access, peer-reviewed publication that is written with dental community needs in mind. In order to stimulate interest and meaningful debate among dentists of all disciplines, the journal is committed to keeping its readers updated about the latest innovations, trends, opinions and key issues in dentistry, whether clinical, practical or science.

During this year also brought an announcement regarding to the conference on Dental Education in 2020. The Impact factor of JDRP is not very good as it is opened recently, but views of their homepage are getting increased day by day. JDRP submitted 14 papers during the 2019 calendar year, 2 of which were rejected in the preliminary screening due to plagiarism or being out of style. In the 2 issues of Volume 1 published during the year 2019, a total of 9 articles were published of which, 50% articles were by foreign authors. JDRP receives all types of articles which include studies related to oral health, such as oral pathology, endodontology, orthodontology, and periodontology are covered within the journal's scope. The journal is especially interested in the prevention, diagnosis, and treatment of diseases affecting the teeth, gums, and mouth, as well as associated pathophysiology, molecular genetics. The Average time period for the article publication is approximately 41-45 days

after getting accepted in preliminary quality check. To ensure good quality, the papers published in the journal are subject to rigorous peer review[1-4].

JDRP also post new updates on their social media accounts to make people aware and motivate them to do innovation by getting inspired with other peoples work. I would also like to express my gratitude to all the authors, reviewers, the publisher, the advisory and the editorial board of JDRP for their support in bringing out yet another volume of JDRP And look forward to their unwavering support in bringing out JDRP Volume 2 in scheduled time. They took minimum charges for the publication of the any article and maintain it within given period of time. They arrange the matter in such a way that it attracts the eyes of the readers as the images are of very good quality with clear formatting. As it is a newly formed journal, thus it doesn't have any impact factor but there homepage views are increasing day by day. We wish that this year JDRP achieve a great success by receiving the best research and review papers which encourage the public as well as scientists to do more innovative work in the field of dental. If anyone wants to submit his article, go through their homepage.
