

What periodontist should be aware after initial dental therapy?

Ossama Alkhatib

Alfarabi Dental College, Saudi Arabia

Abstract:

Periodontal Treatment Strategy (PTS) is planned to follow all therapeutic phases at any time of recalls of supporting periodontal therapy (SPT). It is not enough to remove the irritant factor which is started the periodontal disease, however, should be stop or prevent continuous aggravated environmental contributing factors of disease incidence locally or systemically. Antimicrobial adjunct therapy and host modulation will affect inaccessible bacteria which invade tissue with high numbers and virulence and disturb the delicate ecologic equilibrium. Follow up the patient for maintenance care and oral hygiene becomes more creation to limit the environmental factors affect periodontal disease treatment.
