Regenerative treatment of Criptogenic epilepsy, West's syndrom with transformation in Lennox-Gasto syndrom. Case report. Cure

Victoria Palinska and I.Palinskiy

Private Scientific Institute International Treatment-Health-Educational Center, Ukraine

West's syndrome, like and Lennox-Gasto syndrome – hard generalized form of epilepsy, that characterized some level of pharmacoresistance and often needs neurosurgical operative surgery. The purpose of this article – show the results of treatment West's syndrome and Lennox-Gasto syndrome. Patient O, 6 years had been treating in Private Scientific Institute ITHEC "Victoria" from 2016 to 2017yy. On the moment of coming patient's mother complains on seizures like muscles strain (infantile spasms), and slowing psycho-emotional development. Patient didn't talk, didn't walk. Neurosonography (11/05/2012) – without pathology. EEG (2011) – hypsarrhythmia. EEG – control (2012) – hypsarrhythmia and transformation West's syndrome in Lennox-Gasto syndrome. Patient started course of treatment in age 5 years. For 3 days we didn't determine frequency seizures increasing, but patient had one more intensive seizure (on 50%) on third day of treatment. After this regenerative reaction – frequency of seizures began to decline. After 2 months seizures stopped and didn't determine more. EEG-control (04/05-2017) – absolutely age limit (without hypsarrhythmia and without Spike wave to 3 Hz). Patient started talk and walk with help. Results: hard generalized epilepsy, like West's syndrome and Lennox-Gasto syndrome can be cured by protocol №V-07.6.1/13-G40.

Biography

Victoria Palinska is a Neurologist and Neurosurgeon and had been working in PSI from 12 years and has large experience in Regenerative treatment (by Method of I.Palinskiy), Epilepsy therapy and surgery. She is the director of Private Scientific Institute International Treatment-Health-Educational Center "Victoria" after her Father and used regenerative treatment by protocols of our Institute. And author 6 patents and 12 scientific articles.
