Child Psychiatry symptoms and diagnoses

Neil Senior

Otter Creek Associates, Brattleboro, USA

DSM-5 child psychiatry diagnoses have low inter-rater reliability, often overlap with each other and tend to be limiting in their descriptions. By focussing on a patient's target symptoms one can both simplify treatment interventions and hence hopefully improve outcomes.

Biography

Neil Senior is a Board certified Child Adolescent and Adult Psychiatrist in Vermont. He received his medical degree from The University of Queensland Medical School, Australia and has been in practice for more than 20 years. He did his Internship in Christchurch New Zealand, Child psychiatry Internship in University of Vermont Medical School and Adult Psychiatry Internship in Dartmouth Medical School New Hampshire.
