## New sole presentation for childhood epilepsy

**Maha Nada**

Ain Shams University, Egypt

**A**mong causes of secondary enuresis, epilepsy was none of those. It was observed in 15 children with secondary enuresis whom were urologically free, that their sleep EEG showed epileptic discharge without any other manifestations of epilepsy. After receiving antiepileptics, soon they became dry. There were common manifestations between those patients and they share some EEG similarities which we will try to explain aiming to shed thse light on this possible new syndrome. This can guide future research for better management of such condition.

## Biography

Maha Ali Nada, I am a fourty one years old assistant professor of neurology in Ain Shams University which is one of the greatest univesitiesies in Cairo. Graduated in 1999. I' ve been practicing neurology since 2001 as resident , assistant lecturer, lecturer, and assist prof since 2014. My MD thesis was namd: Clinicoradiological localisation of language disorders in acute ischemic CVS. I joined multiple sclerosis section in our department for 7years during which, I was responsible for day therapy care for all MS patients in our department. I used to attend all neurological conferences and to participate as speaker in some. 2 years ago, I became responsible for the pediatric neurology clinic in my department, which is a specialized afternoon clinic. Being the most senior in the clinic, it was my duty to teach younger staff and to encourage them to attend this new clinic which soon became the largest of the specialized clinics in our department regarding the number of patients attending(40 patients/clinic). Trying to register this large number of patients, we find many candidates for case reports and many ideas for new research. I 've also published a case report in the BMJ (British Medical Journal) on 12/2015 with a group of medical students and I was their mentor. Many puplications in the Egyptian Journal of Neurology, psychiatry and neurosurgery. One paper in the Journal of American Science in 2012.
