## Introduction

Health education is a profession of educating people about health. Regions within this profession include environmental health, physical health, social health, emotional health, intellectual health, and spiritual health, as well as sexual and reproductive health education.

Health education can be characterized as per the rule by which individuals and groups of people learn to behave in a manner conducive to the promotion, maintenance, or restoration of health. In any case, as there are numerous meanings of health, there are likewise different meanings of health education. In America, the Joint Committee on Health Education and Promotion Terminology of 2001 characterized Health Education as "any combination of planned learning experiences based on sound theories that provide individuals, groups, and communities the opportunity to acquire information and the skills needed to make quality health decisions."

The World Health Organization characterized Health Education as "comprising of consciously constructed opportunities for learning involving some type of correspondence intended to further develop health proficiency, including further developing Knowledge, and creating fundamental abilities which are helpful for individual and community health."

## Job of the Health Education Specialist

From the late nineteenth to the mid-20th century, the point of general health was controlling the damage from irresistible illnesses, which were

to a great extent taken care of by the 1950s. By the mid1970s plainly lessening ailment, demise, and rising medical care expenses could best be accomplished through an emphasis on health advancement and infection anticipation. At the core of the new methodology was the job of a health instructor.

A health instructor is "an expertly prepared person who serves in an assortment of jobs and is explicitly prepared to utilize suitable instructive techniques and strategies to work with the advancement of approaches, methods, mediations, and frameworks helpful for the soundness of people, gatherings, and networks". In January 1978 the Role Delineation Project was established, to characterize the fundamental jobs and duties regarding the health teacher. The outcome was a Framework for the Development of Competency-Based Curricula for Entry Level Health Educators. A subsequent outcome was a modified variant of A Competency-Based Framework for the Professional Development of Certified Health Education Specialists (NCHCE, 1996). These reports illustrated the seven spaces of duties which are displayed beneath. The Health Education Specialist Practice Analysis (HESPA II) created "another various leveled model with 8 Areas of Responsibility, 35 Competencies, and 193 Sub-abilities".
